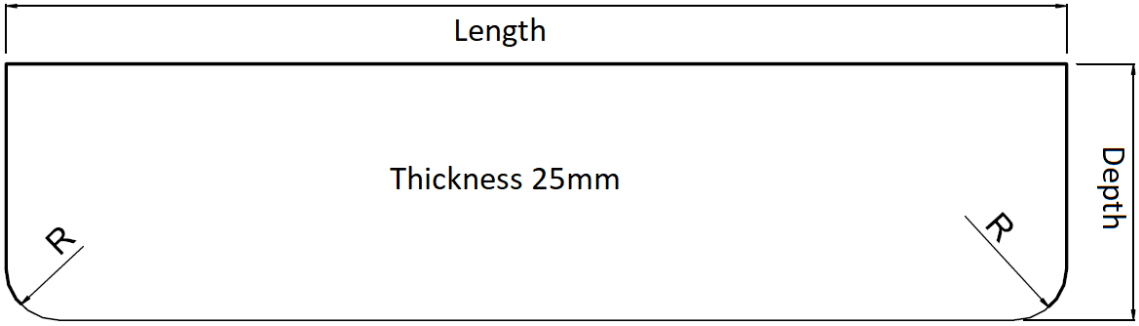
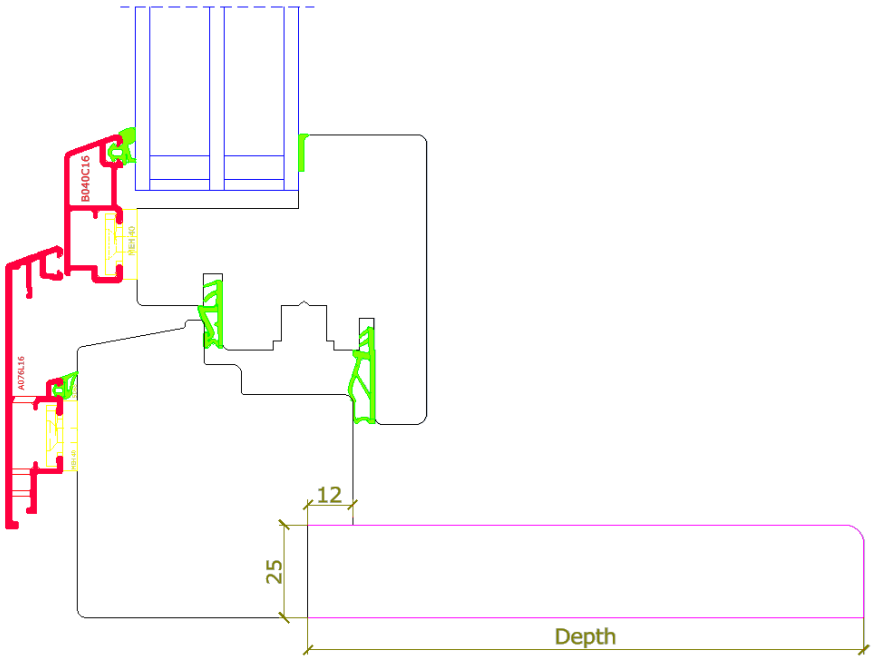
Internal timber sills

Döpfner timber aluminium windows are optimised for use with **internal timber sills.**

These timber sills come in the same timber as the windows and with the same timber finish. They get installed into an internal rebate 25x12, specified in the window schedule.

Dimensions




Length:	Any length under 6m can be specified. Usually we recommend window width + ~40mm to allow small horns on either side of the window that protrude the wall. The corners need to be cut out on site.
Depth:	Available depths are: 150, 200, 250, 300, 350, 400 mm. They can be shortened at the back.
Thickness:	25mm
Radius R:	Standard is 20mm. Different radius possible.
Edges:	Top edge: radius 5mm
